	v	Contributors to this Issue
	vii	Announcement: Tetrahedron Symposia-in-Print
	ix	Preface
	xi	Graphical Abstracts
G. Keglevich, T. Chuluunbaatar, K. Ludányi and L. Tőke	1	Phosphine-boranes based on the 7-phosphanorbornene framework: a regioselective approach to the monoboranes of the dimers of phospholes
P.-H. Leung, G. He, H. Lang, A. Liu, S.-K. Loh, S. Selvaratnam, K. F. Mok, A. J. P. White and D. J. Williams	7	Metal template synthesis and coordination chemistry of functionalized P-chiral phosphanorbornenes
C. Pala, F. Podewils, A. Salzer, U. Englert and C. Ganter	17	Phosphaferrocenes containing the chiral pinene-fused cyclopentadienyl ligand PCp
R. Streubel, H. Wilkens, F. Ruthe and P. G. Jones	21	Synthesis and characterization of some 2*H*-1,4,2-diazaphosphole-, 2*H*-1,3,2-diazaphosphole- and 2*H*-1,2-diazaphosphole-*P*-sulfide derivatives
J. Grobe, D. Le Van, T. Pohlmeyer, F. Immel, H. Pucknat, B. Krebs, J. Kuchinke and M. Läge	27	Novel diphosphetene derivatives by reactions of di(isopropyl)aminophosphaethyne with chalcogens or halogens
J. Kerth, U. Werz and G. Maas	35	Reactions of (1-diazo-2-oxoalkyl)silanes with 3*H*-1,2,3,4-triazaphospholes: a route to short-lived 4-imino-1,2,4(λ^5)-diazaphospholes
M. Yoshifuji, M. Nakazawa, T. Sato and K. Toyota	43	Formation and rearrangement of dithioxo- and diselenoxophosphoranes carrying bulky 4-*t*-butyl-2,6-bis(methoxyalkyl)phenyl groups
A. W. Holderberg, G. Schröder, D. Gudat, H.-P. Schrödel and A. Schmidpeter	57	Electrophile induced addition reactions of bis-phosphonio-isophosphindolide cations
S. G. Ruf, U. Bergsträßer and M. Regitz	63	Organophosphorus compounds. Part 144: A novel approach to 1,3-oxaphospholes from phosphaalkynes and isomünchnones
N. Gül and J. H. Nelson	71	Use of an enantiomerically pure cyclopalladated complex of (*S*)-*N*,*N*-dimethyl-α-(2-naphthyl)ethylamine for an enantioselective synthesis of a chiral diphosphine by an intramolecular [4+2] Diels–Alder cycloaddition
L. Nyulászi	79	Aromatic compounds with planar tricoordinate phosphorus
O. Tissot, J. Hydrio, M. Gouygou, F. Dallemer, J.-C. Daran and G. G. A. Balavoine	85	Some aspects of the structural and coordination chemistry of the 2,2′-biphosphole

A. Marinetti, S. Jus, J.-P. Genêt and L. Ricard	95	Additional data on the synthesis and properties of chiral 1,2-bis(phosphetano)-benzenes
T. Faitg, J. Soulié, J.-Y. Lallemand, F. Mercier and F. Mathey	101	Asymmetric isomerisation of a cyclic diene: a comparative study of BINAP and BIPNOR–rhodium(I) catalysts
P. P. Gaspar, H. Qian, A. M. Beatty, D. A. d'Avignon, J. L.-F. Kao, J. C. Watt and N. P. Rath	105	2,6-Dimethoxyphenylphosphirane oxide and sulfide and their thermolysis to phosphinidene chalcogenides—kinetic and mechanistic studies
G. Oba, S. Phok, G. Manuel and M. Koenig	121	Cyclo and spirozirconation: synthesis of new phospholane-boranes and polyphosphine-boranes
M. J. van Eis, F. J. J. de Kanter, W. H. de Wolf, K. Lammertsma, F. Bickelhaupt, M. Lutz and A. L. Spek	129	1,4-Addition of a phosphinidene complex to *cisoid* 1,3-dienes
J. B. M. Wit, G. T. van Eijkel, M. Schakel and K. Lammertsma	137	The electrophilic phosphinidene complex $^{i}Pr_2N–P{=}Fe(CO)_4$ trapped by alkynes
J. Liedtke, S. Loss, C. Widauer and H. Grützmacher	143	Phosphiranes as ligands for platinum catalysed hydrosilylations
T. Lebbe, P. Machnitzki, O. Stelzer and W. S. Sheldrick	157	Reactions of coordinated ligands. Part 19: Template synthesis of a macrocyclic secondary tetraphosphine by oxidative demetallation of crown phosphine Ni(II) complexes

	v	Contributors to this Issue
	vii	Graphical Abstracts
M. Sienkowska, V. Benin and P. Kaszynski	165	Preparation and NMR analysis of 2,6-heterodifunctional halobenzenes as precursors for substituted biphenyls
Y. Kawanami, T. Mitsuie, M. Miki, T. Sakamoto and K. Nishitani	175	New chiral ligands derived from (*S*)-leucine for the enantioselective addition of diethylzinc to aldehydes
M. Imai, A. Hagihara, H. Kawasaki, K. Manabe and K. Koga	179	Stereoselective reactions. Part 31: Catalytic asymmetric alkylation of achiral lithium enolates using a chiral tetradentate amine in the presence of an achiral bidentate amine
K. Nagasawa, A. Georgieva and T. Nakata	187	Practical and stereoselective synthesis of a pentacyclic guanidine system: synthetic studies toward ptilomycalin A and related compounds
M. Ishikura, A. Hino, T. Yaginuma, I. Agata and N. Katagiri	193	A novel entry to pyrido[4,3-*b*]carbazoles: an efficient synthesis of ellipticine
C. David, L. Bischoff, B. P. Roques and M.-C. Fournié-Zaluski	209	Straightforward and diastereoselective synthesis of tetrafunctionalized thiol synthons for the design of metallopeptidase inhibitors
S. J. Spak and O. R. Martin	217	The synthesis of an *O,C*-trisaccharide: the *O,C*-analog of methyl 4′-*O*-β-D-glucopyranosylgentiobioside
A. Falcou, D. Marsacq, P. Hourquebie and A. Duchêne	225	General access to *ortho*- and *meta*-alkylanilines for the synthesis of polyanilines and poly(anilines-co-substituted anilines)
F. Segat-Dioury, O. Lingibé, B. Graffe, M.-C. Sacquet and G. Lhommet	233	A general synthesis of enantiopure 1,2-aminoalcohols via chiral morpholinones

A. Zamri and M. A. Abdallah	249	An improved stereocontrolled synthesis of pyochelin, siderophore of *Pseudomonas aeruginosa* and *Burkholderia cepacia*
B. Caro, F. Le Guen-Robin, M. Salmain and G. Jaouen	257	4-Benchrotrenyl pyrylium salts as protein organometallic labelling reagents
A. Leprêtre, A. Turck, N. Plé, P. Knochel and G. Quéguiner	265	First study of syntheses and reactivity of Grignard compounds in the diazine series. Diazines. Part 27
B. Folléas, I. Marek, J.-F. Normant and L. Saint-Jalmes	275	Fluoroform: an efficient precursor for the trifluoromethylation of aldehydes
F. Moreau, D. Florentin and A. Marquet	285	Synthesis of new biotin derivatives
C. Le Houérou, C. Bennetau-Pelissero, V. Lamothe, F. Le Menn, P. Babin and B. Bennetau	295	Syntheses of novel hapten–protein conjugates for production of highly specific antibodies to formononetin, daidzein and genistein

Tetrahedron
Instructions to contributors

Note:* Tetrahedron *authors are no longer required to format their manuscripts for camera-ready reproduction

Please follow these instructions carefully to ensure that the review and publication of your paper are as swift and efficient as possible. These notes may be copied freely.

Tetrahedron seeks to publish experimental or theoretical research results of outstanding significance and timeliness in the field of Organic Chemistry, Bioorganic Chemistry and related disciplines. Publications may be in the form of Articles, Reports, or Symposia-in-Print.

ARTICLES should describe original research in organic chemistry of high quality and timeliness. Because of restrictions on the size of the journal, priority will be given to those contributions describing scientific work having as broad appeal as possible to the diverse readership. We ask referees to help in the selection of articles which have this breadth and suggest that papers covering narrower aspects of the field be sent to journals specializing in those areas. It is strongly recommended that articles be written in English.

REPORTS are specially commissioned reviews of research results of topical importance. Such articles, published only in English, are commissioned in appropriate fields by the Editors of Tetrahedron Reports.

SYMPOSIA-IN-PRINT comprise collections of original research papers (including experimental sections) covering timely areas of organic chemistry. Topics for forthcoming Symposia are announced in the journal from time to time. A Guest Editor will invite authors active in the field to submit papers which are then reviewed and processed for publication by the Guest Editor under the usual refereeing system. Opportunity is also provided for other active investigators to submit contributions. These Symposia are published in English.

Journal policy

The language of submission is English, but articles in French or German will be considered. Papers are submitted on the understanding that the subject matter has not been previously published and is not being submitted elsewhere. Authors must accept full responsibility for the factual accuracy of the data presented and should obtain any authorization necessary for publication. All papers are sent to referees who advise the Editor on the matter of acceptance in accordance with the high standards required. Referees' names are not disclosed, but their views are forwarded by the Editor to the authors for consideration. Authors are **strongly** encouraged to suggest the names and addresses of suitable referees.

Manuscript preparation

General requirements: Manuscripts should be printed on one side of the page only, using black type on good quality white paper. Pages must be numbered. The corresponding author's full mailing address, plus phone and fax numbers and e-mail address should be included. The manuscript should be compiled in the following order: Title, Authors, Affiliations, Abstract, Keywords, Introduction, Results, Discussion, Conclusion, Experimental, References, Captions, Tables, Figures, Schemes.

Graphical abstract: Authors must supply a graphical abstract when the paper is first submitted. The abstract should summarize the contents of the paper in a concise, pictorial form useful for rapid scanning of the journal. Carefully drawn structural formulae are desired which serve to illustrate the theme of the paper. The manuscript title, authors and affiliations should be identical to those in the main paper. An example can be found in the journal following these instructions. Graphical abstracts must fit within the area shown in the example.

The contents of papers are the sole responsibility of the authors, and publication shall not imply the concurrence of the Editors or Publisher.

Title: The title should be brief, specific and rich in informative words; it should not contain any literature references or compound numbers.

Authors and affiliations: Where possible, supply given names, middle initials and family names for complete identification. Use superscript lowercase letters to indicate different addresses, which should be as detailed as possible, and must include the country name. The corresponding author should be indicated with an asterisk, and contact details (fax, e-mail) should be placed in a footnote. There should be only one corresponding author. Information relating to other authors (e.g. present addresses) should be placed in footnotes indicated by the appropriate symbols (see below).

Abstract: Authors must include a short abstract of approximately four to six lines that states briefly the purpose of the research, the principal results and major conclusions. References and compound numbers should not be mentioned in the abstract unless full details are given.

Text: Text should be subdivided in the simplest possible way consistent with clarity. Headings should reflect the relative importance of the sections. Ensure that all tables, figures and schemes are cited in the text in numerical order. The preferred position for chemical structures should be indicated. Trade names should have an initial capital letter, and trademark protection should be acknowledged in the standard fashion, using the superscripted characters ™ and ® for trademarks and registered trademarks respectively (although not for words which have entered common usage, e.g. pyrex). All measurements and data should be given in SI units where possible, or other internationally accepted units. Abbreviations should be used consistently throughout the text, and all nonstandard abbreviations should be defined on first usage. Authors are requested to draw attention to hazardous materials or procedures by adding the word **CAUTION** followed by a brief descriptive phrase and literature references if appropriate. The experimental information should

be as concise as possible, while containing all the information necessary to guarantee reproducibility.

References: In the text, references should be indicated by superscript Arabic numerals which run consecutively through the paper and appear after any punctuation; ensure that all references are cited in the text and vice versa. The reference list should preferably contain only literature references; other information (e.g. experimental details) should be placed either within the body of the text, or as a footnote to the text. Preferably, each reference should contain only one literature citation. Authors are expected to check the original source reference for accuracy. Journal[1] titles should be abbreviated according to American Chemical Society guidelines (*The ACS Style Guide*; Dodd, J. S., Ed.: American Chemical Society: Washington, DC, 1997). Inclusive pagination is strongly recommended. Book references[2,3] should cite author(s), chapter title (if applicable), editor(s), book title, edition/volume, publisher name, publisher location, date and pages. Examples, including a thesis citation,[4] are shown below.

1. Barton, D. H. R.; Yadav-Bhatnagar, N.; Finet, J.-P.; Khamsi, J. *Tetrahedron Lett.* **1987,** *28,* 3111–3114.
2. Katritzky, A. R. *Handbook of Organic Chemistry*; Pergamon Press: Oxford, 1985; pp. 53–86.
3. Smith, D. H.; Masinter, L. M.; Sridharan, N. S. In *Heuristic DENDRAL: Analysis of Molecular Structure*; Wipke, W. T.; Heller, S. R.; Feldmann, R. J.; Hyde, E., Eds. Computer representation and manipulation of chemical information. John Wiley: New York, 1974; pp. 287–298.
4. Cato, S. J. Ph.D. Thesis, University of Florida, 1987.

Footnotes: Footnotes should appear at the bottom of the appropriate page and be indicated by the following symbols: *, †, ‡, §, ¶, ||.

Tables
All tables should be cited in the text, and numbered in order of appearance with Arabic numerals. All table columns should have a brief explanatory heading and where appropriate, units of measurement. *Vertical lines should not be used.* Footnotes to tables should be typed below the table, each on a separate line, and should be referred to by superscript letters.

Artwork
Figures, schemes and equations must be cited in the text and numbered in order of appearance with Arabic numerals; other graphics should be placed at a particular position in the text but not specifically referenced. All graphics (including chemical structures) must be supplied camera-ready, for reproduction at single or double column width (83 mm or 176 mm, respectively). Please ensure that all illustrations within a paper are consistent in type and quality. Captions should not be included as part of the graphic; instead all captions should be supplied at the end of the text. All graphics must be labelled with the figure or scheme number, and the corresponding author's name.
If graphics are created using ChemDraw the preferred settings are: font 10 pt Helvetica, chain angle 120°, bond spacing 18% of length, fixed length 14.4 pt (0.508 cm), bold width 2.0 pt (0.071 cm), line width 0.6 pt (0.021 cm), margin width 1.6 pt (0.056 cm), and hash spacing 2.5 pt (0.088 cm). Compound numbers should be in bold face.

Photographs: Four sets of original photographs should be supplied; please note that photocopies of photographs are not acceptable.

Colour: Colour figures may be printed in the journal at no charge to the author, provided that the Editor considers the colour necessary to convey scientific information. Colour figures should be supplied in hard copy format ready for reproduction.

Journal conventions
Nomenclature: Authors will find the following reference book useful for recommended nomenclature. It is the responsibility of the author to provide correct chemical nomenclature.
IUPAC Nomenclature of Organic Chemistry; Rigaudy, J.; Klesney, S. P., Eds; Pergamon: Oxford, 1979.

X-Ray crystallographic data: Prior to submission of the manuscript, the author should deposit crystallographic data for organic and metal-organic structures with the Cambridge Crystallographic Data Centre. The data, without structure factors, should be sent by e-mail to: deposit@ccdc.cam.ac.uk, as an ASCII file, preferably in the CIF format. Hard copy data should be sent to CCDC, 12 Union Road, Cambridge CB2 1EZ, UK. A checklist of data items for deposition can be obtained from the CCDC Home Page on the World Wide Web (http://www.ccdc.cam.ac.uk/) or by e-mail to: fileserv@ccdc.cam.ac.uk, with the one-line message, sendme checklist. The data will be acknowledged, within three working days, with one CCDC deposition number per structure deposited. These numbers should be included with the following standard text in the manuscript: Crystallographic data (excluding structure factors) for the structures in this paper have been deposited with the Cambridge Crystallographic Data Centre as supplementary publication numbers CCDC … . Copies of the data can be obtained, free of charge, on application to CCDC, 12 Union Road, Cambridge CB2 1EZ, UK [fax: +44-(0)1223-336033 or e-mail: deposit@ccdc.cam.ac.uk]. Deposited data may be accessed by the journal and checked as part of the refereeing process. If data are revised prior to publication, a replacement file should be sent to CCDC.

Characterization of new compounds: All new compounds should be fully characterized with relevant spectroscopic data. Microanalyses should be included whenever possible. Under appropriate circumstances, high resolution mass spectra may serve in lieu of microanalyses, if accompanied by suitable NMR criteria for sample homogeneity.

Supplementary material: Concise supplementary material may be provided for review purposes only. Supplementary material will only be published at the Editor's discretion.

Copyright guidelines
All authors must sign the 'Transfer of Copyright' agreement before the article can be published. This transfer agreement enables Elsevier Science Ltd to protect the copyrighted material for the authors, but does not relinquish the author's proprietary rights. The copyright transfer covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microfilm or any other reproductions of similar nature and translations, and includes the right to adapt the article for use in conjunction with

computer systems and programs, including reproduction or publication in machine-readable form and incorporation in retrieval systems. Authors are responsible for obtaining from the copyright holder permission to reproduce any figures for which copyright exists. Copyright forms may be photocopied from recent issues of the journal. Please note that photocopied signatures are not acceptable.

Submission of manuscripts

The original and three copies of the manuscript, including the graphical abstract and a signed and dated copyright transfer agreement, should be sent to the appropriate Regional Editor (see below). Authors must also include a brief statement justifying acceptance. To achieve rapid publication authors are encouraged to fax or preferably e-mail their first submission to the Editor at the time that they mail the manuscript; the date of submission will be taken as the date of e-mail. The corresponding author's full mailing address, plus phone and fax numbers and e-mail address should be supplied to aid rapid communication. Papers sent to the wrong Regional Editor will be forwarded (causing delay) to the appropriate Editor as determined by the *permanent address* of the corresponding author.

Disk submission: When a manuscript has been accepted for publication by the editorial office, authors are requested to also supply their paper (and graphical abstract) in electronic format on disk. Please give full details of operating system, programs used, number of files sent, and information contained in each file. It is important that the file on disk and the accepted printout are identical.

Text: We can accept most word-processing formats (but prefer Microsoft Word: IBM or Macintosh). Most formatting codes will be removed or replaced on processing your article so there is no need for you to use excessive layout styling. In addition, do not use options such as automatic word breaking, justified layout, double columns, automatic paragraph numbering (especially for numbered references) or EndNote. However, do use bold face, italic, subscripts, superscripts, etc. Do not embed the figures into the text file.

Graphics: Computer-generated illustrations, halftones and line/tones should also be provided where possible. The following points should be taken into consideration when preparing electronic graphic files: Tagged Image File Format (TIFF) or Encapsulated PostScript (EPS) files are preferred. Suggested packages for line graphics are ChemDraw, Adobe Illustrator (version 3.0 or above), Freehand and Corel Draw. Graphics created in WordPerfect and Word generally have too low a resolution for our requirements. Files of scanned line graphics can be accepted at a minimum resolution of 1000 dpi, for scanned halftones, 300 dpi, and scanned line/tones, 500 dpi. Colour should be scanned at 300 dpi (500 dpi for colour line/tones).
Since we cannot guarantee the usability of graphic files, hard copies of all illustrations must accompany the accepted printout of the manuscript in all cases.

Which libraries benefit?

Those libraries which take all the journals from a package will see an immediate benefit and saving. Libraries which take all but one of the journals may find that they can buy the missing title for a nominal amount.

Take advantage of these packages

Subscription Agents have been informed about these money-saving packages and are in a position to help librarians take advantage of the savings offered. Contact your nearest Regional Sales Office directly for more information and help.

BACK ISSUES OF THIS JOURNAL

Back issues of this and all other Elsevier Science journals are available in hard copy. New subscribers to a journal may purchase back issues of that publication in hard copy edition at 25% discount off the standard price. Elsevier Science maintains stocks of back issues and orders may be placed with confidence at your nearest Elsevier Science office. Should any issue of a volume be temporarily out of stock at the time of ordering, a high quality photoduplicated copy will be supplied at no extra charge to complete your order.

SAVE UP TO 25% BY PURCHASING COMPLETE SETS

Customers wishing to purchase complete sets can do so at a saving of 25% off the individual volume price.

MICROFORM EDITIONS

Back issues in microform of Elsevier Science research journals are also available. For further information please apply to your nearest Elsevier Science office.

BACK ISSUES PRICE LIST

Full details of the rates of back issues of all Elsevier Science journals can be found in our Back Issues Price List. Please contact your nearest Elsevier Science office for a copy.
